- Other

“The way
to win”

Almost 2 decades of our journey, there are many stories going on that create both experience and learning without limitation. If compared to driving on the road, we have passed through all road, including gravel roads, rubber paved roads, concrete roads, and sometimes we encounter a broken road. And if we look closely, these are fun, exciting, provocative and that is the driving to develop our services continuously. Every story that happens is considered a valuable memory and encourages us to continue this journey.

“TICA'S
Way”

TICA's Way

Ep 00

Inspiration for dreaming

In 2003, there was a group of people who dreamed of having a Thai Certification Body with a concept "Valued Added Audit", and then that dream came true. When Thai Certification Body was set up called **TICA** ..Thai-Brave...

No one dares... but we dare to change

With the old idea that "Doing an ISO is create a document according to the requirement, and It's same pattern for every organization." We change to "Doing ISO to manage risks with suitable pattern and unique way (Different and smart)"

And everyone in team knew that this was a huge challenge.... **"Change people's thoughts is not easy, especially if it's not clear in our concept. We cannot change other person's mindset absolutely."**

**"Change
is hard"**

TICA's Way

Ep 01 *The first step with challenges*

The first year of startup with enormous power in **“Value-Added Audit”** perspective; an audit to create value which many organizations are unfamiliar. Causing us to answer a lot of questions...

“Is your audit concept correct? Is it practical?”

“The quality manual must be written follow requirement only. It is impossible with a quality manual that only has 6 pages.”

“The name “TICA” was never known. Is a Thai certification body ? Will it make it internationally reliable?”

And many more questions that sometimes make us smile. We have to answers, We have to explain, We have to wait for the trust to arise in our customers.

But that's makes us even more clear our concept is correct. **“Clarity in concept and belief in it , may not see immediate results but will surely bring success in the future.**

“SMART
concept”

TICA's Way

Ep 02

Inspiration

Our most challenging time pushing the potential of our team to do mission like "Take the ants to fight with elephants" because all of competitors are Certification Body that has been hundreds of years and TICA who is only 10 years old which is a very different time.

But with our commitment, it creates more enormous power.... **from "Passion" causing "Empowerment"** to push us moving forward. And make the concept of "Value Added Audit" infiltrate to every organization.

We fight because we don't want the ISO to go back the old days. For our opinion letting the ISO go back to original concept is literally destroying development opportunities.

One thing that motivates us is customers like our service. They say that our service is different from others, TICA understand their organization. We think "Of course, TICA is Thai Certification Body, founding and operating here. We must understand context of organizations in Thailand. We are confident that our services are most suitable for organizations based in Thailand than anyone else. From customer satisfaction makes us smile currently.

Everyone recognizes the identity of TICA as "Small but Smart". Don't stop fighting and keep pushing forward work to achieve our dreams."

“ The
Determination ”

TICA's Way

Ep 03

Step up and be strong

Our proud moment is **“the success of clients along with the strength of our team”**. We have efficient team and competent auditor, and earned the trust from customers for our audits in Japan. We have gained confidence from many large Japanese companies.

When looking back to the first year we offered a “Free” assessment service to many organizations. Customer are rejected even for small companies. But now our customers have many sizes including a large company makes us smile and relieve tiredness.

We've discovered that success comes from building strong teams. Then, with the potential of everyone in team will leading to the success of organization, both TICA and "customer". We are starting to see results with stories that communicate to our team **"We will grow up together"**

“The important of organization is the “Teamwork”. If everyone is ready and determined to walk towards the same point, success is within reach.”

“ TEAM
WORK ”

TICA's Way

Ep 04

TICA with an important step "The Way to Win"

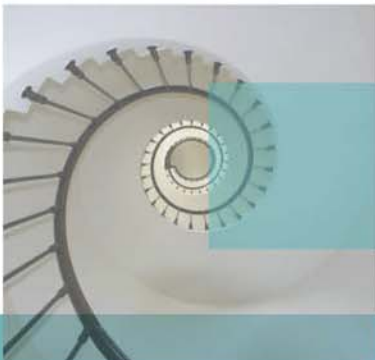

Because creating "Value Added Audit" may not be enough for a rapidly changing world. Therefore, we must elevate our services to meet such demands with "The Way to Win"

- Simple
- Dynamic
- Creativity
- Just in Time
- Value-Added

Implementation of ISO system has to be in terms of "winners" in the business game. If an organization does ISO and cannot increase its competitiveness, it is considered unfortunate and leads to corporate risk.

Our past experiences give enough energy for us to create new things and make every organization to be a "Winner". We look forward to being part of your organization to make the successful because that's our "Success" also.

"The success of each organization is difficult to measure, but for TICA we judge ourselves from our customers as "winners" in the business game"

“ The
Winner ”

TICA'S Way "The way to win"

TICA's Way is a concept that the Auditor and TICA team take as a guideline in their work. Because TICA is a partner who support all customers to get an ISO system that can create benefits and lead to be the "winner" in business game. TICA's Way is as follows.

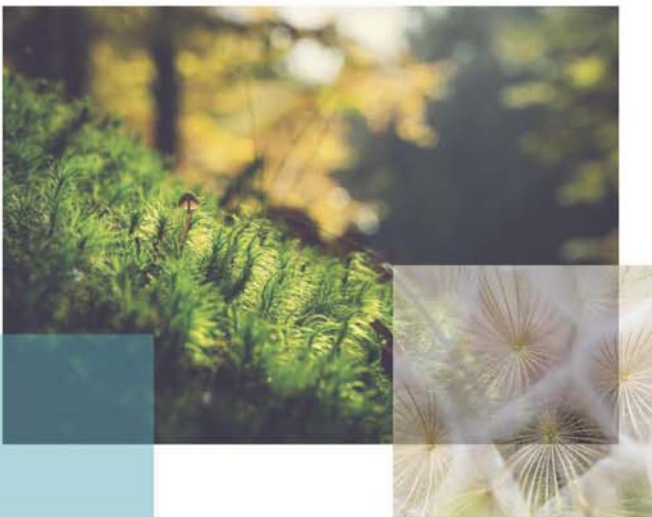

Simple

"Simple is the best" TICA concept is "work smart" which is organization should create the simple system, simple workflow and achieve the expected results, we call the efficiency of work. **But unbelievable, many people overlook this point** because **they believe on ISO in traditional way** that has always been create a complex system **can reduce errors and pass assessment easily.**

Dynamic

Modern organizations must adapt themselves to keep up with the changed of business environment , set agile management model with driving power. **TICA accepts and helps organization move towards by such way.**

Creativity

TICA's audit concept creating an atmosphere for creativity. And **we also accept new management styles which is different but creates benefits for the organization** (Different & Smart)

TICA'S way "The way
to win"

- *Simple*
- *Dynamic*
- *Creativity*
- *Just in Time and*
- *Valued Added*

Just in Time

Speed will respond to the needs of all parties and make the organization survive. But if the assessment does not encourage the mechanism and auditor also audit by requirement not risk management. **It like to take a wagon to race on the Formula 1 racing.**

Valued-Added

The audit that **responds to the needs of all interested parties** which make benefit more than audit follow requirement.
